ABOUT **US**

www.mdccinternational.com

WHO WE ARE?

Established in Beirut, MDCC International (Market Developers and Commercial Consultants) started its activities in 2011. Our company provides the commercial consultancy in order to build-up and to maintain the long standing relationship and strong business cooperation between the principals and the customers.

Being the exclusive distributor of different brands such as Abet Laminati, we pride ourselves on our ability to connect our different suppliers with the middle east.

MDCC International S.A.L Offshore established hubs of distribution thanks to its sister Companies: MDCC International FZE (Free Zone Sharjah, UAE), ICCT, Pro design Lebanon, Proal Group, Lebanon & Saudia, and UAE, and to its subdistributors.

MDCC and its sister companies, Proal, Prodesign and ICCT, complement each other in a unique way covering everything, from an idea and concept development to execution/realization. We supply materials, propose innovative designs, provide technical support, guarantee a quality finish and after-sales maintenance.

OUR SERVICES

Working on behalf of certain manufacturers in defined areas with set contracts as exclusive distributors. We manage the goals of our principals in our covered area and we support our customers in our commercial experience, introducing innovative new products of high quality which meet and exceed the standards required in the markets in the right price positioning.

HPL

THIN LAMINATE

1. THE MATERIAL

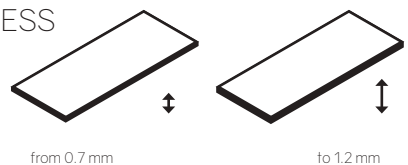
Decorative High Pressure Laminates (HPL), as defined by the European and international standards for HPL, are high-density panels (≥1.35g/cm3), finished and ready for use, which have exceptional mechanical, physical strength and chemical resistance, are easy to work and simple to maintain.

HPL panels are made of several layers of cellulose fibre material impregnated with thermosetting resins and then simultaneously subjected to both pressure (>7MPa)) and heat (140 / 150°C) in special presses, for a fixed time, which varies depending on the type of laminate.

This process creates a stable, inert, homogeneous, nonporous and high density material, with physical and chemical properties that are totally different from those of its original ingredients. In addition, given its very low permeability, HPL acts as a barrier against the possible emission of formaldehyde and other volatile substances (VOCs) from any timber substrates it is applied to.

2. SIZES

3. THICKNESS



HPL

THIN LAMINATE

4. COMPOSITION

HPL panels are made exclusively of cellulose-based materials (60-70%) and thermosetting resins (30-40%). They can have decorative finishes on one or both sides.
These are the different layers:

• Overlay

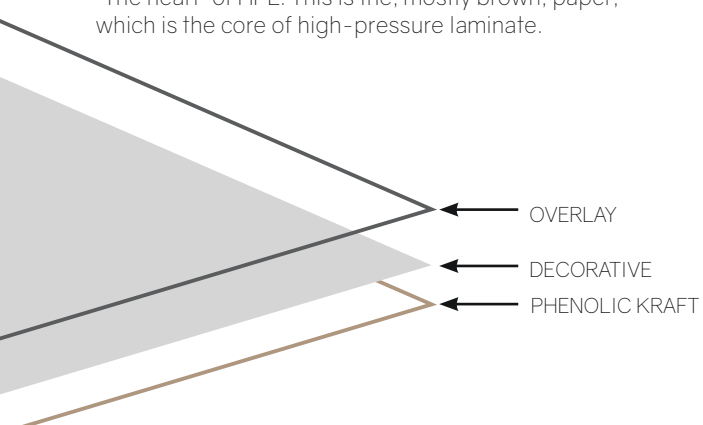
A highly transparent paper, which makes the laminate surface abrasion and scratch resistant. Used only with printed patterns.

• Decorative paper

External paper, with no chlorides.
These are coloured or patterned and give the laminate its aesthetic appearance.

• Kraft paper

"The heart" of HPL. This is the, mostly brown, paper, which is the core of high-pressure laminate.



5. FINISHES

A wide range of patterns and finishes that can satisfy multiple design and manufacturing requirements.
In some cases there is a close relationship between the pattern and its finish, while, in others, the finish can be used on most of the patterns.
The finish will never be chosen only for its aesthetic value.
The decision must also be based either on the intended use of the finished product or on the type of preparatory work proposed.
Gloss finishes, for example, are less scratch resistant and are therefore less suitable for use on worktops.
Finishes with less highly textured surfaces are easy to clean and are therefore more suitable for use wherever a high degree of hygiene is required.
More highly textured or high-relief surfaces offer greater resistance to wear and chafing.
Light coloured surfaces make scratches or wear and tear less noticeable, while dark ones are less subject to the aging effects of light.

STRATIFICATO HPL

SOLID IDENTITY

THE MATERIAL

Stratificato HPL maintains its aesthetic and performance characteristics for the entirety of its life cycle.
The core is made up of layers of cellulose fibres impregnated with phenolic resins; the surface by one or more layers of cellulose fibres impregnated with thermosetting resins, providing the decorative function bonded together by high pressure process in compliance with the standard EN 438:2005 – Part 4.

MEG

MATERIAL EXTERIOR GRADE

THE MATERIAL

MEG is a self-supporting laminate panel manufactured under high pressure (HPL - High Pressure Laminate) with a decorative surface suitable for outdoor applications, resistant to light and weathering.
The core of the panel consists of layers of saturated kraft paper impregnated with phenolic resin and at least one decorative layer of cellulose paper impregnated with thermosetting resin, having both aesthetic and weather resistant functions.

One or both sides can have a decorative surface.

The panels are available in standard version (MEG) and flame retardant version (MEG F1), which have improved reaction to fire.

MAIN APPLICATIONS

- FAÇADES
- BALCONIES
- SUNSCREENS
- STREET FURNITURE
- OUTDOOR SIGNAGE
